FOREWORD

1. Read the instructions contained in the enclosed booklet carefully, because it contains important information on installation, operation and maintenance safety. Store this booklet carefully for any further consultation by other operators.
2. Having removed the packing material, check that all the equipment is present.
If there is any doubt, do not use it and contact qualified personnel.
The packing elements (plastic bags, foam polystyrene, nails, etc.) should be kept away from children, because they are dangerous.
3. Before switching the equipment on, make sure that the model plate data conforms to that of the electrical and water distribution network.
4. Installation should be carried out by qualified personnel according to the manufacturer's instructions.
5. This equipment should be destined to the use which it has been conceived for. Any other application should be considered improper and consequently dangerous.
6. The equipment should only be used by personnel trained for its use.
7. Operators must strictly follow all hygienic requirements in the handling of clean dishware and cutlery.
8. Do not leave the machine in an environment at temperatures lower than 0°C.
9. The protection of the machine is IP X4, therefore it should not be washed with high pressure directed water jets.
10. Qualified personnel only can access the control panel, after having disconnected the machine from the primary current supply.
11. The appliance is made according to EEC 89/336 regarding radio noise suppression and electromagnetic compatibility.
12. According to EEC directive nr.23 of 19/02/1973 and the law of actuation nr.791 of 18/10/1987, our appliances are built-up according to the good technique norms in force in Italy and abroad.
13. Noise level of the machine, less than 63dB(A)

INSTRUCTIONS FOR USE

CONTROL PANEL

- Q1** Main switch
- H1** Pilot lamp "machine ON"
- H2** Pilot lamp "machine READY"
- H3** Pilot lamp "machine WORKING"
- S3** Push button "CYCLE START"
- S4** Push button "REGENERATION START" (only mod. GFS90A)
- S** Plug
- S** Salt container (only mod. GFS90A)
- I** Regulating screw for rinse aid injector

OPERATION AND USE

1. Before washing make sure that:

- the wall-mounted on/off switch is switched on;
- the water tap is open;
- water is present in the distribution network;
- the pump protection filters are installed in their respective positions;
- the overflow is inserted;
- all rotating parts are free;
- the rinse aid dispenser is full;
- make sure that dishware is in good conditions as it may cause cleaning difficulty and have bacteria.

2. Set switch "**Q1**" to position "**I**" to enable the automatic wash tank filling and the consequent triggering of the heating element. The lamp "**H1**" is on.

3. As soon as visual indicator "**H2**" is ON; pour about 30 gr. of detergent directly into the tank, paying attention to distribute it uniformly on the filters, the quantity being according to supplier's instructions. Add 15 gr. every 7 cycles to achieve a concentration of 1,5 gr./lt. In order to respect our environment, use only the correct amount of detergent.

When using chlorinated detergent, it is suggested to use an automatic dispenser; otherwise, brownish spots might appear on the surfaces due to chlorine reactions. Detergent should always be placed near the pump filter.

4. Then, introduce the glasses or the cups to wash, after having removed the solid waste and having placed them into the proper racks. The cups and the glasses should be turned upside down, while the cutlery should be put vertically into the proper container, and the same applies to dishware.

5. By means of switch "**Q1**" select the wash cycle according to conditions of the dishware:

- (pos. "**I**") **short cycle** with glasses or cups;
- (pos. "**II**") **medium cycle** with normally dirty dishes;
- (pos. "**III**") **long cycle** with particularly dirty dishes or deep dishes

A **manual wash** is possible by operating main switch "**Q1**" in the positions "∞" and by pressing the "**S3**" button activates the wash cycle for a maximum time of 8 min and 20sec. To interrupt the wash cycle press "**S3**". The pause and rinse cycles will follow and if incorporated also the drain cycle.

6. Close the door and press the "**S3**" button to start cycle, the end of which will be indicated by the switching off of the "**H3**" lamp.

ATTENTION: Machine in conformity with the existing hygienic standards, guaranteeing a final rinse at 85°C. Wash cycle automatically lengthened if final rinse temperature is not reached. When this auto-cycle intervenes and the cycle is pro-longed, after 8 minutes the "H3" indicator flashes to indicate this intervention and the cycle continues (water supply temperature is likely to be the problem, otherwise contact an assistance center since it is a rinse water heating intervention.). Turn off the machine to remove this alarm.

7. Remove the rack and slightly incline it to permit a perfect drain; allow dishware to dry and after having washed one's hands, handle the rack in order not to touch the dishware inside then place the rack on hygienically clean shelves.

8. At the end of washing, switch "Q1" in position "O", empty the tank by taking out the overflow tube, then close the door and put the switch "Q1" in position "I" for a few minutes to wash the machine. Then again put the switch "Q1" in position "O" and wait until the tank is completely empty.

At this point, the filters can be taken out, in order to be washed, then replace its with the overflow in its place

➤ **For machines with drain pump** pull out the overflow pipe, then with opened door and machine switched on, push button "S3" for the drain cycle, automatically the machine will carry out the drain cycle for 2 minutes and 20 seconds.

The lamp "H3" illuminates when the machine is draining.

At this point, the filters can be taken out, in order to be washed, then replace its with the overflow in its place

For further use switch off the machine

.For any further information concerning equipment cleaning, read chapter "USEFUL SUGGESTIONS".

9. When the washing is finished, switch off the equipment by turning off the main supply through the general wall switch and close the water supply.

INSTRUCTIONS DURING THE WASHING

1) Do not plunge bare hands into the water containing the detergent. If this happens, wash them immediately and abundantly with fresh water.

2) When the machine is operating, do not open the door too rapidly.

3) Use only specific anti-foaming detergents.

4) Disconnect the equipment in case the machine is out of order or it does not work properly. For the repairs consult a technical assistance centre authorised by the manufacturer and ask only for an original spare parts.

5) Never modify the thermostat settings.

6) Check that lamp "**H2**" is on.

7) Wash tank water should be changed at least twice a day or according to daily wash requirements.

8) Do not subject clean dishware to any further cleansing treatment such as brushes or drying towels.

If these instructions are not followed, the safety of the equipment can be compromised.

USEFUL SUGGESTIONS

1) MAINTENANCE

IMPORTANT: Before carrying out the cleaning and maintenance operations, disconnect the equipment from the electric supply.

Frequently check and clean the nozzles. The frequency of this operation will depend on the quantity of residues, which may result in an unsatisfactory washing result.

- ◆ For the inside and outside cleaning of the machine, **do not use corrosive products** such as sodium hypochlorite (bleach) savelling water and hydrochloric acid, acids, steel wool or steel brushes.
- ◆ The presence of calcium and magnesium salt in the water can compromise machine performance, thus ask qualified personnel to remove the deposits periodically.
- ◆ In order to avoid some oxidation risks, or chemical reactions, generally the stainless steel surfaces have to be well cleaned.

2) OPTIMAL RESULTS:

A possible wash deficiency can be noticed when residue remains.

Marks can be caused by an insufficient rinse: in this case check that the rinse nozzles are clean and that there is sufficient water supply pressure.

In case of dishware residue check that:

- the washing nozzles are clean
- the water temperature is around 60°C
- there is detergent
- the pump suction filter is clean
- the racks are suitable for the dishes and cutlery that are to be washed
- the position of the cutlery and the dishes in the racks are correct

3) TEMPORARY MACHINE NON-USE

In case the machine is stopped for some weeks, it is recommended before closing it to fill the tank and run the machine with clean water, then empty it out, in order to avoid the forming of bad odour and that any residue remains in the pump.

If necessary repeat this operation until the water leaving the machine is clean.

If the machine is stopped for many weeks, it is recommended to oil the stainless steel surfaces with paraffin oil and to discharge the water from the boiler and the electric pump.

4)SANITIZING THE MACHINE

Sanitizing the machine at least once a week is of the utmost importance in order to guarantee hygiene even when the machine is not in use.

It is advisable to use a disinfecting product suggested by an authorised detergent dealer.

The use of this product will satisfy hygienic requirements, even during machine non use.

Before switching off the machine run the machine briefly with clean water.

5)HARD WATER CONDITIONS

If a hard water supply is present, mineral deposits will form within the machine and also on dishware.

In order to avoid the above conditions a periodic removal of these deposits is necessary.

The frequency and method of this operation upon consultation by your detergent supplier.

6)RESINS REGENERATION OF THE WATER SOFTENER *(only for machines with built-in water softener)*

The regeneration of the water softener resins is completely automatic.

The presence of some opaque spots on the glasses will show that it is necessary to start the regeneration.

First of all, make sure that in the designated tank container "S" there is some regeneration salt (1kg is enough for about 5 regenerations).

This operation has to be carried out with full tank.

Machine on, close the front door and press the button "S4" for approx. 3sec.

After that the lamp "H3" flashes for 20 minutes (during this operation the machine cannot be used).

The end of which will be indicated by the switching off of the "H3" lamp.

Turn off the machine, take out the overflow pipe from the tank and wait until it is completely empty then close the door, turn on the machine for a few minutes to wash the machine.

At this point switch off the machine, replace the overflow in its place, the equipment is ready to be used.
